AI COMMUNICATION & COLLABORATION

TEAM WORKSPACE · FROM TALK TO TASKS

Keep the why. Carry the work forward.

Team chats, agreed decisions and tasks with owners, in one place.

Goal
Where it leads

Task
Owner and status

Talk
Team chat

Decision
Agreed, with the why

ARTWORK — NOT A REAL SCREEN

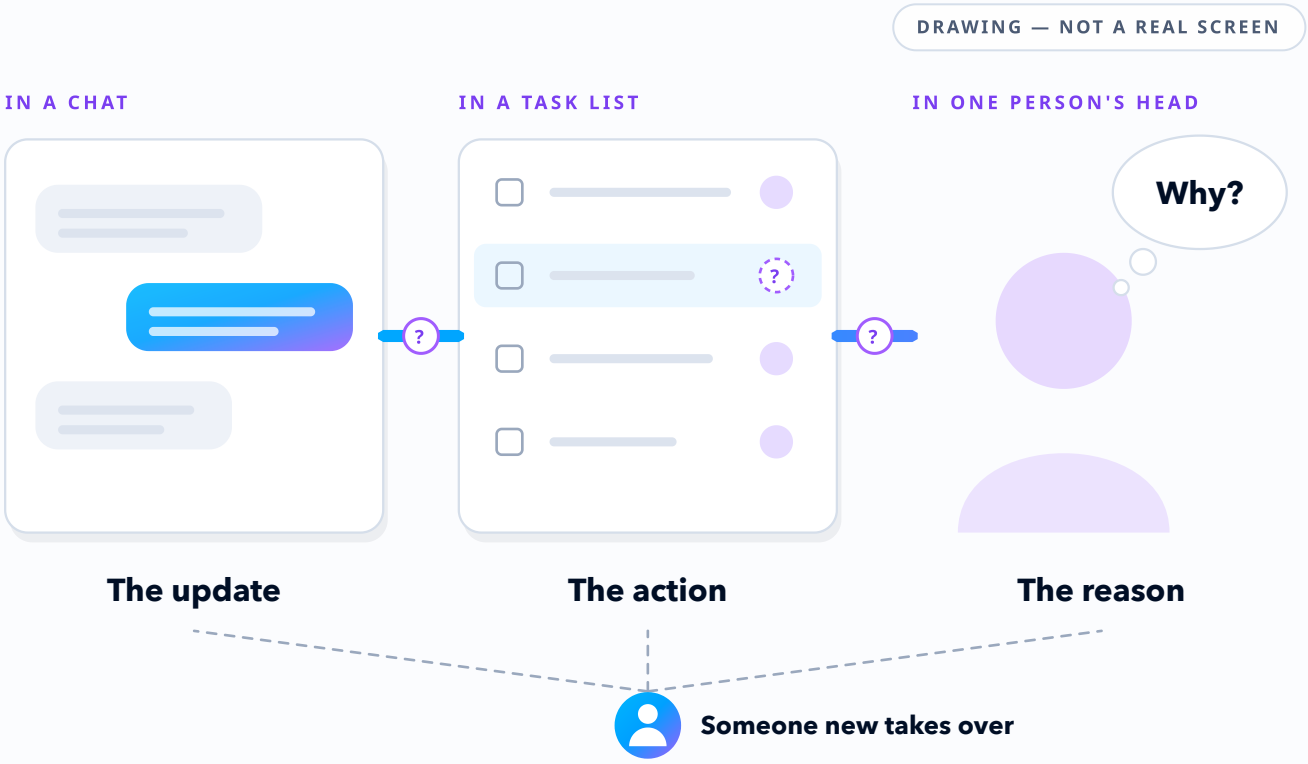

OPEN FOR A GUIDED TRY-OUT

Some AI screens show sample results.

SOUND FAMILIAR?

The talk happened. Where did the decision go?

A client update sits in a chat. The task sits in a list. The reason stays in one person's head. When someone new takes over, the team must rebuild the picture.

01

Agreements lose their why.

02

Good ideas get lost.

The missing link is the path between them. →

WHAT IT COSTS

The cost is another round of “what did we agree?”

When the why is hard to find, hand-overs slow down. Tasks can lose their owner. The same idea gets talked about again. The problem is not too few messages. It is the gap between talking and doing.

01

Piecing it together again

02

Next steps unclear

03

Harder to check work

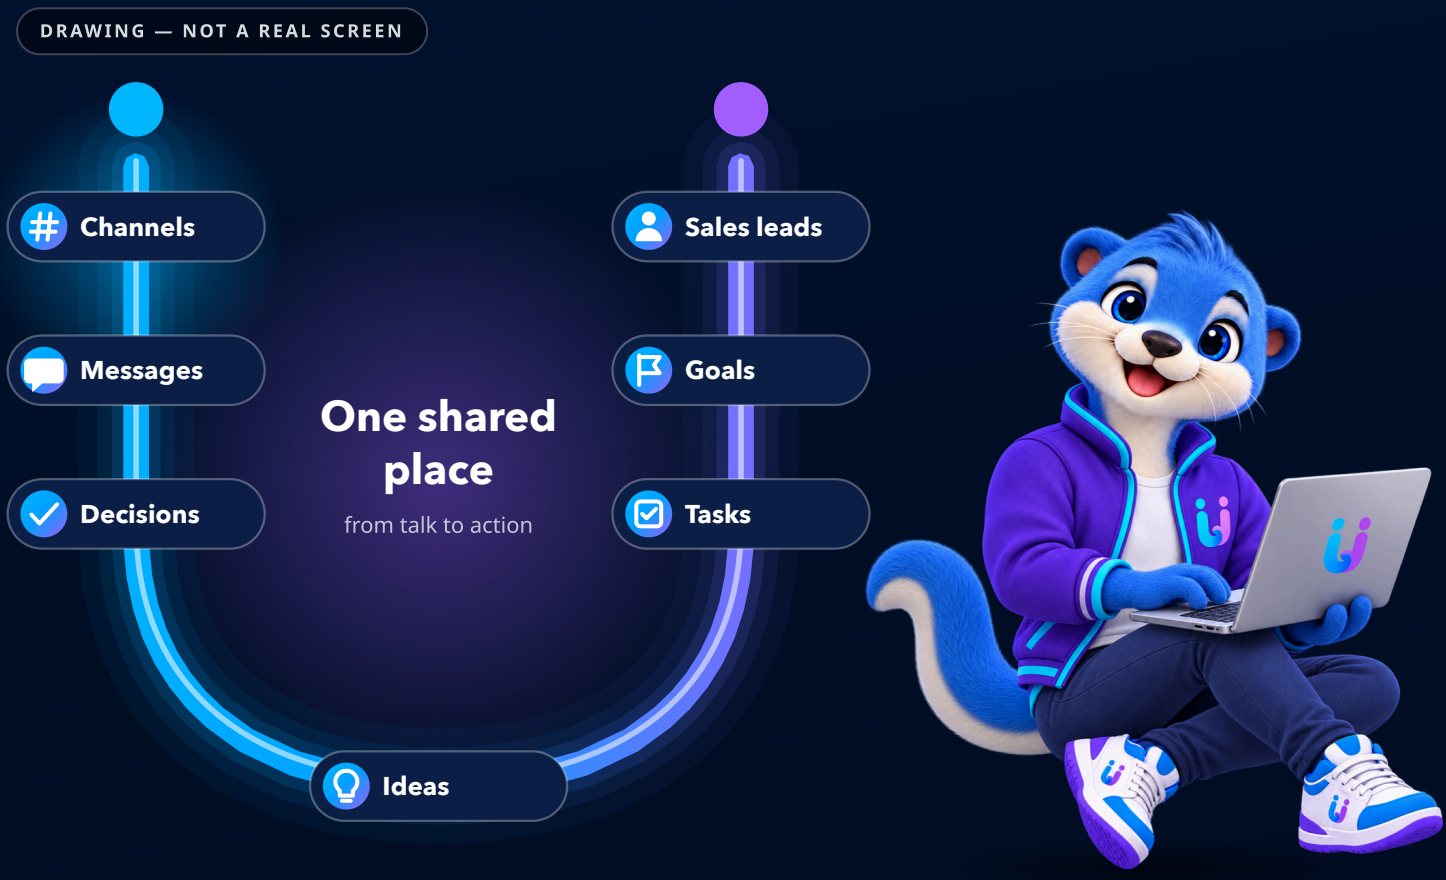

A simple drawing. These costs were not measured.

A more joined-up way to work starts here. →

MEET UNIFLOW

One shared place for the talk and what comes next.

UniFlow holds channels, messages, agreed decisions, ideas, tasks, goals and a simple sales-lead list. Keep useful work records in one place. Then see if your team can follow the why from talk to action.

OPEN FOR A GUIDED TRY-OUT

Some AI and advanced screens show sample results. Outside AI services need setting up. A demo does not prove it is ready for daily business use.

See how it works, in four steps. →

HOW IT WORKS

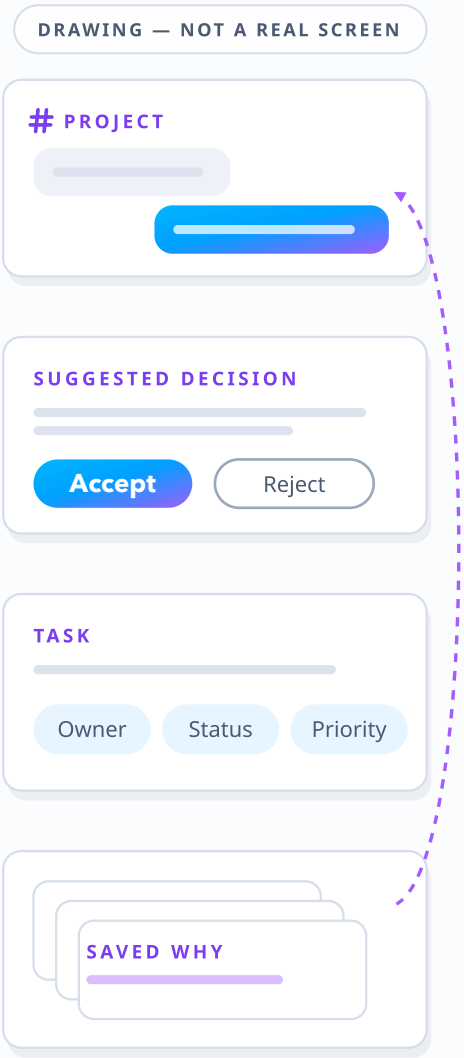

A clear order. A next step you can see.

1
Talk
Keep project messages in channels.

2
Review
Accept or reject suggested decisions and ideas.

3
Assign
Give a task an owner, status and priority.

4
Look back
Find the saved why when the question comes back.

PARTLY READY

AI here means software that spots decisions and ideas in chats. This is only partly ready. Built-in AI gives sample answers. Real AI needs separate testing.

Next: what each step holds. →

WHAT IT HOLDS

The next step needs more than a note.

Try the main steps first. Extra tools matter when they fit your team's job.

DRAWING — NOT A REAL SCREEN

01

Talk

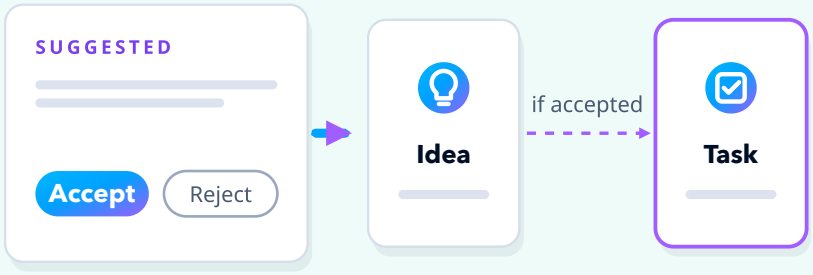

Channels, reply threads and live team updates.

02

Review

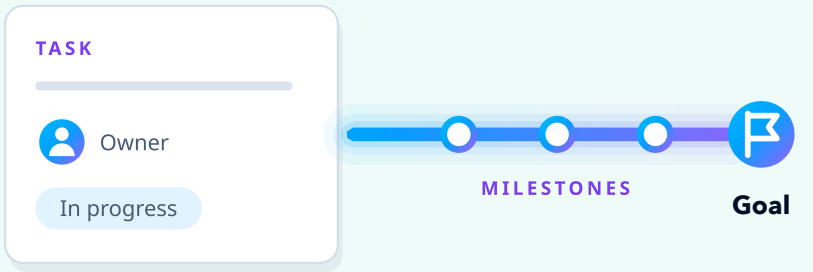

Accept decisions; turn kept ideas into tasks.

03

Follow through

Task owners, status, goals and milestones.

Extra parts: alerts, admin and reports. Check exact steps and status in the try-out.

Next: a drawing of the task page. →

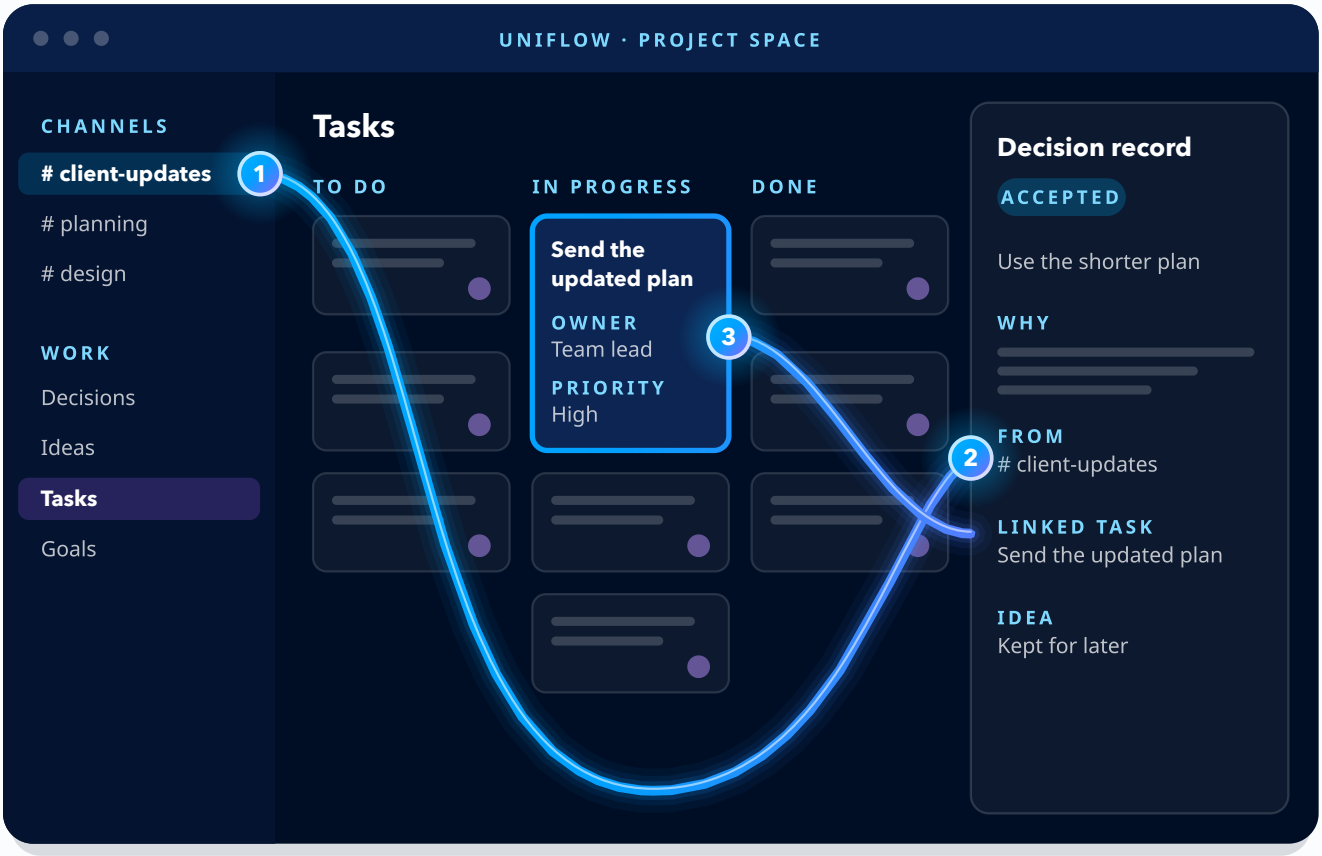

INSIDE THE WORKSPACE

Make the work visible. Keep the why close.

The task page holds the next action. Decision and idea records keep the review around it. Try the full journey with one real project. Do not judge it from the main screen alone.

DRAWING — NOT A REAL SCREEN

EXAMPLE DRAWING — NOT REAL DATA

1 Where the talk happened 2 The agreed decision 3 The task that follows

The try-out space starts empty. It is not a customer's live system.

Use a situation you know to judge the fit. →

WHERE IT HELPS

Start with a job you already know.

MADE-UP EXAMPLES Not customer stories or measured results.

01 Project hand-over

NEED	STEP	RESULT
A new owner needs the agreement behind the work.	Open channel history and agreed records.	A clearer start when you take charge.

02 Weekly follow-up

NEED	STEP	RESULT
Talk ends with several next steps.	Record decisions. Give tasks owners.	Actions have a clear place to be checked.

03 Idea review

NEED	STEP	RESULT
An idea needs thought before agreeing.	Keep the idea. Make it a task once accepted.	Possible work is kept, but not treated as approved.

The difference is in how the pieces join up. →

A FAIR COMPARISON

Compare the steps. Keep the claims exact.

Your tools may already fit how you work. Test the joined-up steps and what is ready before you switch.

THE USUAL WAY	THE CATCH	THE UNIFLOW WAY
Chat plus a separate task list	Links and copying are done by hand.	**Checked records and work in one shared place.**
Scattered notes and sheets	Needs steady updates by hand.	**Set fields for decisions, goals and tasks.**
AI summary alone	A summary may not lead to action steps.	**Partly-ready AI pick-out, then your review, then tasks.**

WHAT MAKES IT DIFFERENT

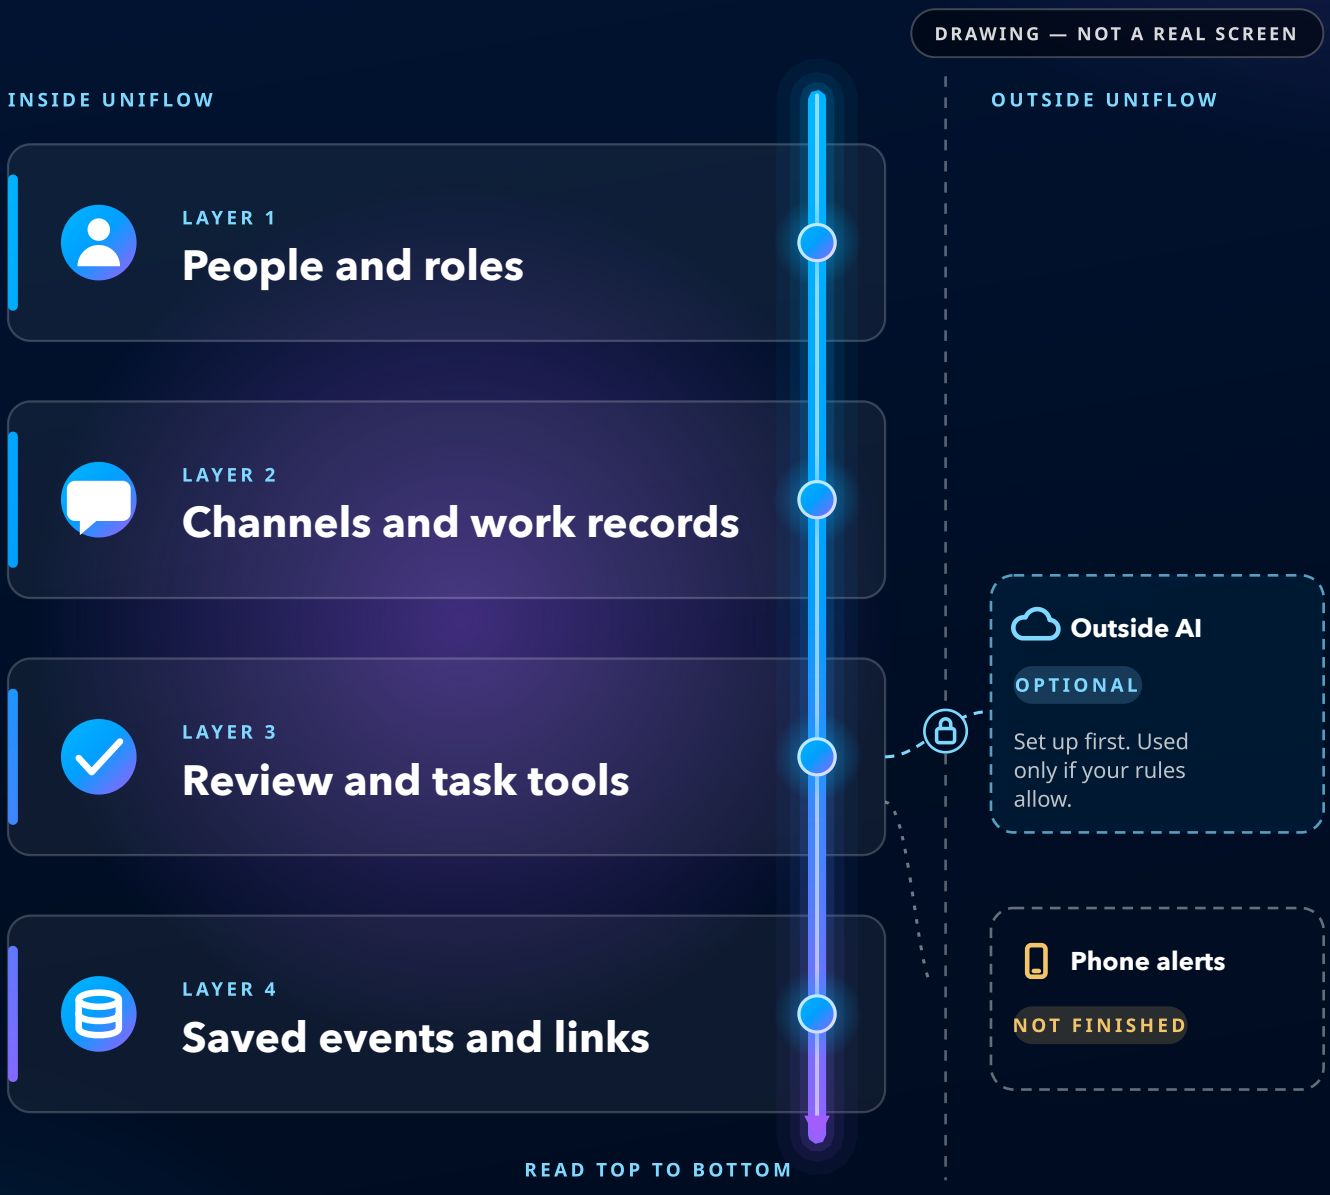

- Talk, record and task stay joined.
- Nothing is agreed until you say yes.
- Each record shows its source and links.

Look under the hood, without the jargon. →

HOW IT IS BUILT

One system picture. Clear edges.

Four layers, read from top to bottom.

-------- Dashed lines mean outside parts, or parts not finished yet.

The proof should be as clear as the picture. →

WHAT WE TESTED

Show the path.
Do not borrow trust.

12 steps in one test run on one computer

WHAT THE RUN COVERED

- Messages
- AI-style output
- Saved findings
- Links between records
- Search
- Alerts
- Summary screens

The run used fake AI with fixed answers. It shows the path works on one computer. It does not show real AI quality or large-scale use.

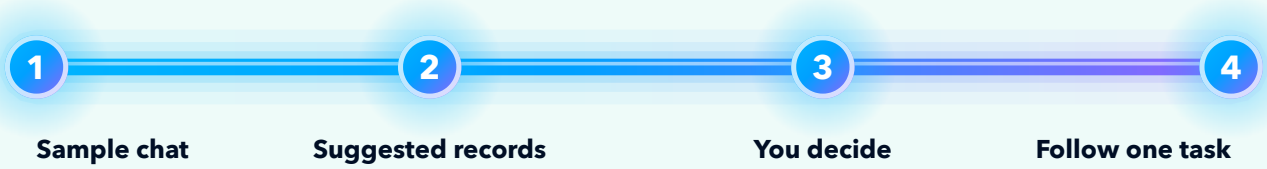

ONE-COMPUTER TEST ONLY No customer results, large-scale speed or outside certificates are claimed.

Proof is where the try-out starts, not where it ends. →

BEFORE YOU START

Start with one project. Check the whole journey.

Use a sample chat. Check the suggested records. Follow one task start to finish. Before real use, confirm roles, data handling, AI behaviour and who runs it.

CHECK THREE THINGS

1. What is ready, and what it needs
2. Access, data and who does what
3. Written scope, costs and a success test

SAMPLE DATA ONLY NOT FINISHED

Some advanced screens use sample data. The link map is a sample picture. App alerts exist. Phone alerts are not finished.

Bring one real question to the next talk. →

NEXT STEP

Bring one way of working you want to follow better.

Pick a project where decisions or hand-overs get lost. Use an example without real names. See what UniFlow joins up today.

Ask for a guided try-out

Reply to the person who shared this brochure. Say which steps you want to explore.

Use sample details or remove names. No purchase, live access or start date is implied.
